

product description

Initial position determination for all transponders after server restart

SIMATIC RTLS Locating Manager initial position detection 100 for 100 transponders, option for license Basic, single license, software and license key download - - email address required for delivery .

software version

V2.13.0.0

### product functions

product version	add-on license for Locating Manager Basic 100
product description	Initial position determination for all transponders after server restart
product options	Initial position determination after server restart for all tags which are currently located within locating ranges of the system / Configuration of time and performance behavior for the position determination / Option to manually start the position determination / in connection with the message management a message is generated which signals the final system availability
PROFINET conformity class	F

<b>security information</b>	
security information	<p>Siemens provides products and solutions with industrial cybersecurity functions that support the secure operation of plants, systems, machines and networks. In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial cybersecurity concept. Siemens' products and solutions constitute one element of such a concept. Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place. For additional information on industrial cybersecurity measures that may be implemented, please visit <a href="http://www.siemens.com/cybersecurity-industry">www.siemens.com/cybersecurity-industry</a>. Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats. To stay informed about product updates, subscribe to the Siemens Industrial Cybersecurity RSS Feed under <a href="https://www.siemens.com/cert">https://www.siemens.com/cert</a>. (V4.7)</p>
